PCAO-F EXAM PREP

Cracking Tabular & Scenario-Based MCQs

ROW and the 5-part method, with 10 practice questions

AI startup Mentor’s team

ROW · The reading method

For tabular questions, the ask determines which rule break counts.

R Read the ask

Underline FIRST, TWO or wrong label.
FIRST: stop at the earliest rule break.
TWO: inspect every row and select two.
Wrong label: test the definition.

O Open each row

Test each row against its rule.
Does it match the rule exactly?
Mark OK or wrong.
A professional tone proves nothing.

W Whittle the options

Remove options that fix a later row.
Remove extremes and wrong rules.
Keep the option that names the exact rule break.

The wrong step is usually a true-sounding sentence that quietly breaks one rule.

PART A · TABULAR QUESTIONS

MCQ Time

Read the ask. Test each row against its rule. Then compare the options.

MCQ 1

Governance, Risk & Responsible Use · Select ONE

Riverside Housing Association (about 500 staff): GrantSorter
Chidi Okeke is a tenancy support coordinator at Riverside Housing Association. About 1,200 tenants apply each autumn for a winter heating grant. Chidi proposes an AI Skill called GrantSorter: it reads each application and drafts a priority band (high, medium or low) for the Grants Officer. Letters go out only after the Grants Officer approves every band. Chidi applies the four-question method and records every step.
Company facts. Bank account numbers are regulated. Riverside AI Workspace is approved for tenant names, contact details and income bands. GrantSorter was published in the Skill library by the Housing Systems team. Chidi's session already has: email (read + send) and the tenant-records system (read + write). The grant rules say: "Applicants must be told if automated tools take part in assessing applications."

#	Question	What the associate recorded
1	Case	Appropriate with review. Deciding factor: human judgment and accountability (who receives help). Gate: before any band is used, the Grants Officer checks each band against the application form; before any low-band letter goes out, the Head of Tenancy checks it.
2	Data	Red at first (bank account numbers). Banding needs income band and household size, not bank details, so a script masked them. I scanned the text (2 strays, masked) and kept no key. What remains (name, contact, income band, free text) is Yellow. Route: Riverside AI Workspace.
3	Capability: Source	I phoned the Housing Systems lead. She confirmed her team published GrantSorter and that the library version is the current one.
4	Capability: Reach, Fit, Actions	A Skill uses everything my session reaches. The job only needs to read applications, so email is disconnected and the tenant-records system is now read-only.
5	Capability: Outside content	Tenants write the free-text "reason for need", so I recorded it as outside content. The Skill only writes a band that a human reads, so it has no action to hijack.
6	People: Fairness and disclosure	I sampled 40 applications banded high and 40 banded low. Applications that arrived as paper scans were banded low more often. The grant rules require telling applicants, and the application form now says automated tools take part.
7	People: Escalation	I wrote to the governance lead: "The scan gap is small and the Skill is accurate overall. Please confirm we can go ahead."
8	Record	One page with who / what / when. Failure threshold: "about 5%" (my estimate). Residual risk: "low".

Which is the first step at which Chidi's work departs from the method taught in the chapter?

A. Step 8, because the threshold and residual risk were estimates instead of being marked OPEN QUESTION and routed.

B. Step 7, because the pattern went up as a verdict to be confirmed, not as a specific question with evidence.

C. Step 6, because a band gap between scans and typed forms means the use case is inappropriate and must stop.

D. Step 5, because free text written by tenants is outside content, so the Skill should never read it at all.

MCQ 1 · ROW: Understanding

R READ THE ASK

The ask says FIRST step that departs from the method. Underline FIRST. Scan from Step 1 downward and stop at the first row that breaks its rule. The company facts add a hint: the grant rules require telling applicants, and a pattern was found in Step 6.

O OPEN EACH ROW

Row	Rule it is tested against	Verdict
1	A gate names who (a role), what (the risk) and when (before use). Here the Grants Officer and the Head of Tenancy each check before anything is used or sent.	OK
2	Masked, scanned for strays, no key kept, and the Yellow remainder goes to a route approved for Yellow.	OK
3	Source is confirmed with the publisher directly, not by a rumour or a good-looking page. She phoned the lead who published it.	OK
4	A Skill reaches everything the session reaches, so narrow the session. Email is off and records are read-only.	OK
5	Tenants wrote the free text, so it is outside content. With no actions and a human reading every band, the risk is handled.	OK, looks wrong, is fine
6	Fairness means sampling who was excluded or ranked low, not only the top. She sampled both ends and found a gap. The disclosure rule is followed.	OK (the finding is a signal, not an error)
7	When a pattern is found, escalate the question with the evidence and the unresolved point named. She sent a verdict and asked for a yes.	WRONG: first break
8	Guessed values must be marked OPEN QUESTION and routed. Her 5% and "low" are guesses.	Wrong, but later

W WHITTLE THE OPTIONS

Option	Kill type	Why
A	Later bait	A real flaw, but it comes after Step 7 and the ask says FIRST.
B	Keep	Names the exact rule: escalate the question, not a verdict.
C	Too strict	A pattern is a signal, not a verdict. It means look closer and escalate, not stop.
D	Looks wrong, is fine	Outside content plus no actions plus a human reader is routine.

A later mistake can be real and still fail an ask that says FIRST.

MCQ 1 · Answer

Correct answer: B

Step 7: escalate the question with evidence, rather than a verdict to confirm.

Which is the first step at which Chidi's work departs from the method taught in the chapter?

A. Step 8, because the threshold and residual risk were estimates instead of being marked OPEN QUESTION and routed.

B. Step 7, because the pattern went up as a verdict to be confirmed, not as a specific question with evidence.

C. Step 6, because a band gap between scans and typed forms means the use case is inappropriate and must stop.

D. Step 5, because free text written by tenants is outside content, so the Skill should never read it at all.

MCQ 2

Tidewater Travel Insurance (about 250 staff): complaint handling
Sofia Marchetti is a complaints associate at Tidewater Travel Insurance. About 300 complaints arrive each week. She has mapped the workflow and wants to move most steps to Claude. Read every column, including who sees each output next.

#	Step	Owner	Stated reason	Carried by	Who sees the output next
1	Pull the complaint and the policy wording	AI	Mechanical retrieval	Connector	Claude at step 2
2	Classify severity (low, medium, high)	AI	Its reply drafts have been strong for three months	Skill	High goes to the senior handler; low goes straight to the auto-acknowledgement queue, and nobody re-reads it
3	Draft the customer reply	Collaborative	AI drafts, the care agent reviews each reply	Skill + care agent	Care agent: 240 replies this week, average 8 seconds each
4	Send the approved reply	Human	Cannot be undone	Care agent	The customer
5	Compute the refund amount from the policy table	AI	Reversible; checked at row 6	Code execution	Claims supervisor, who approves each payout against the table
6	Approve the payout	Human	This step is the decision the supervisor answers for	Claims supervisor	Finance system, which pays on approval

Which TWO rows show the most serious problems in this map? (Select TWO)

A. Row 5

B. Row 3

C. Row 1

D. Row 2

MCQ 2 · ROW: Understanding

R READ THE ASK

The ask says TWO and most serious problems. Select-TWO items need two hits, so do not stop at the first wrong row.
Keep going down the whole table and mark every row that breaks a rule. Both picks must be right to score.

O OPEN EACH ROW

Row	Rule it is tested against	Verdict
1	Mechanical retrieval, reversible, and Claude reads the output next.	OK
2	Halo delegation: the step went to AI because a different step (drafting) went well. Drafting quality is evidence about the draft, not about the decision. Nobody re-reads low-severity cases, so a wrong "low" is never caught.	WRONG
3	A collaborative step needs a gate someone really staffs. 240 replies at 8 seconds each is a glance and a click, so the gate is unstaffed.	WRONG
4	Sending cannot be undone, so it is human-owned. Classification holds.	OK
5	Arithmetic is not low-stakes by itself, but the figure is reversible and lands in front of a human at row 6. The "must be computed" reason belongs in Carried by, and it is.	OK, looks wrong, is fine
6	The step is the decision the supervisor answers for, so it stays human (strictest criterion wins).	OK

W WHITTLE THE OPTIONS

Option	Kill type	Why
A (Row 5)	Looks wrong, is fine	Reversible and checked at the very next row.
B (Row 3)	Keep	Unstaffed gate.
C (Row 1)	Do-nothing / fine	Mechanical, and read by Claude at step 2.
D (Row 2)	Keep	Halo delegation.

For Select TWO, both choices must name rows that break a rule.

MCQ 2 · Answer

Correct answer: B and D

Rows 3 and 2: an unstaffed review gate and halo delegation.

Which TWO rows show the most serious problems in this map? (Select TWO)

A. Row 5

B. Row 3

C. Row 1

D. Row 2

MCQ 3

Skills & Connectors · Select ONE

Fenwick & Dale Lettings (about 40 staff): setting up Claude
Ingrid Solheim is the lettings coordinator at Fenwick & Dale Lettings. She keeps a log of each repeated friction she felt, what she set up in Claude to remove it, and why. The rest of the team will copy her setup.

#	The friction she felt	What she set up	Her reason
1	"I paste the same tone rules, layout and sign-off into every tenant letter."	A Skill holding the house style	I keep re-explaining how
2	"I copy this week's viewings out of the shared calendar into a message."	A calendar connector, read-only, scoped to the Viewings calendar	I keep fetching data from another app
3	"Every Monday I pull expiring tenancies from the tracker and need them in our fixed reminder layout."	A tracker connector (read-only) plus a Skill for the layout	The job needs the data and the format
4	"A landlord asked for a reference letter. I will not need another this year."	A new Skill, so the letter is saved	It might be useful later
5	"A landlord's agent emailed me a zip file for sending notices."	Installed it as a Skill after reading its description page	The page looks official
6	"I need last week's invoices from one Drive folder."	A Drive connector with write access to the whole drive	I will never have to change it

Which is the first row at which Ingrid's setup departs from what the course teaches?

A. Row 6, because a one-folder job was given write access to the whole drive instead of the smallest scope.

B. Row 5, because a file from an outside sender was installed without reading its SKILL.md first.

C. Row 4, because a task done once is just a good prompt, and a Skill earns its place only when the task repeats.

D. Row 3, because a job needing data and a format should use one Skill alone, since a Skill can fetch the tracker itself.

MCQ 3 · Answer with ROW

Correct answer: C · Row 4 · Skill for a one-off task

R READ THE ASK

FIRST: rows 5 and 6 contain later errors. Start at row 1 and identify the earliest rule break.

O OPEN EACH ROW

Row	Rule it is tested against	Verdict
1	Re-explaining how every time means a Skill.	OK
2	Fetching data from another app means a Connector. Start read-only and scope to the smallest calendar.	OK
3	Needing data and a fixed format means both.	OK
4	A task done once is just a good prompt. A Skill is worth making only when the task repeats. "It might be useful later" is not repetition.	WRONG: first break
5	Install Skills from trusted sources and read the SKILL.md first. A zip from a stranger read via a description page fails that.	Wrong, but later
6	Scope to the smallest folder the task needs, and start read-only. Whole-drive write access fails both.	Wrong, but later

W WHITTLE THE OPTIONS

Option	Kill type	Why
A	Later bait	Real flaw (scope), but Row 6 comes after Row 4.
B	Later bait	Real flaw (unread Skill), but Row 5 comes after Row 4.
C	Keep	Names the exact rule.
D	Wrong picture	A Skill is a set of instructions, not a door into the tracker. Data from another app needs a Connector, so Row 3 is correct.

MCQ 4

Cobalt Freight (about 120 staff): weekly carrier-rate work
Amina Diallo is an operations analyst at Cobalt Freight, a freight broker. She is handing her weekly carrier-rate work to Claude on the web and has recorded each job, how the agent reaches it, and where any lasting rule is kept.

#	Job	Reach path and approval mode	Lasting rule or fact, and where it is kept
1	Collect weekly rates from a carrier portal (no connector exists; the account is read-only)	Built-in browser, Manual approval while she learns the site	None
2	Save the finished rate sheet to the shared Drive	Drive connector, write, scoped to the Rates folder	None
3	Draft the weekly update for client Orchid	Mail connector, draft only	"Orchid wants one-page updates": saved as a global standing instruction
4	Confirm bookings in the carrier portal (this spends money)	Claude in Chrome using her saved company-card login, Auto mode	None
5	Run the whole sequence every Monday	Scheduled now, before she has run it by hand once	None

Which is the first row at which Amina's setup departs from what the course teaches?

A. Row 5, because scheduling a workflow nobody has walked by hand repeats its flaws every single week.

B. Row 1, because a browser should never be used when a connector might exist for the portal one day.

C. Row 4, because an action that spends money needs Manual approval, not Auto, inside a signed-in session.

D. Row 3, because a rule for one client belongs in that client's Project, not in a global instruction.

MCQ 4 · Answer with ROW

Correct answer: D · Row 3 · A client rule in the wrong layer

R READ THE ASK

FIRST: the money and scheduling errors come later. Test where the lasting client rule belongs.

O OPEN EACH ROW

Row	Rule it is tested against	Verdict
1	Use the most structured tool that can do the job. No connector exists, so a browser is the correct next rung. Manual approval while learning the site is right.	OK
2	A connector can be the exit door for finished work. It is scoped to one folder.	OK
3	Persistence is a stack, not one thing called memory. Put each durable fact in the narrowest layer that applies. A one-client rule belongs in that client's Project. A global instruction applies to every client.	WRONG: first break
4	Spending money needs Manual approval, and a saved login in a signed-in session raises the risk.	Wrong, but later
5	Scheduling repeats a workflow more reliably. It does not fix a bad one, so walk the work first.	Wrong, but later

W WHITTLE THE OPTIONS

Option	Kill type	Why
A	Later bait	Right rule, wrong row for FIRST.
B	Wrong rule	Connector before browser applies only when a connector exists. None does.
C	Later bait	Right rule, wrong row for FIRST.
D	Keep	Names the exact layer rule.

MCQ 5

AI Fluency · Select ONE

Northgate Language Institute (about 90 staff): enrolment confirmations
Anjali Rao is the admissions coordinator at Northgate Language Institute. This week Claude drafted enrolment-confirmation emails for 300 new students. Anjali kept a log and labelled each entry with one of the 4Ds.

#	Day	What Anjali did	Her label
1	Mon	Decided Claude drafts the confirmations and she approves the recipient list before anything is sent	Delegation
2	Mon	Gave Claude the template, the tone, and a rule never to mention fees	Description
3	Tue	Compared Claude's list with the enrolment system and found two students listed twice	Discernment
4	Wed	Removed passport numbers from the export, because the drafts needed only names and course dates	Diligence
5	Thu	Added a line to each email: "prepared with AI help and checked by admissions staff"	Description
6	Fri	Noticed she was editing Claude's drafts more heavily than she would have written them herself	Discernment

One entry carries the wrong label and belongs under Diligence. Which entry?

A. Entry 5, because telling readers that AI helped is transparency, and transparency sits under Diligence.

B. Entry 1, because approving the recipient list before sending is a check on the output, so it is Diligence.

C. Entry 3, because comparing two lists is Delegation work: it decides which system is the authority.

D. Entry 6, because fixing drafts by hand is Description work: she is describing the job again.

MCQ 5 · Answer with ROW

Correct answer: A · Entry 5 · Transparency diligence

R READ THE ASK

Wrong label: test the action against the 4Ds. Telling readers about AI help is transparency diligence.

O OPEN EACH ROW

Entry	Rule it is tested against	Verdict
1	Task delegation: who owns each part. Approving the recipient list is a human-retained decision.	OK, looks like Diligence, is Delegation
2	Product description (template, tone) plus performance description (never mention fees).	OK
3	Product discernment: is the result any good?	OK
4	Creation diligence: choose data responsibly before and during the work. Redaction keeps the pattern, not the person.	OK
5	Transparency diligence: being honest about AI's role when it affects people. Telling readers AI helped is not telling Claude what to do.	WRONG LABEL
6	Process discernment: is working this way actually paying off? Editing heavily is the book's own example.	OK

W WHITTLE THE OPTIONS

Option	Kill type	Why
A	Keep	Names the exact sub-competency.
B	Wrong picture	Approving a list is task delegation.
C	Wrong row	Comparing a list with a source is discernment.
D	Wrong row	Judging how much editing is needed is process discernment, not describing the job.

PART B · SCENARIO QUESTIONS

MCQ Time

Split the story into five parts. Find the hidden clue. Then compare the options.

The 5 Parts of Every Scenario

Parts 1 to 4 set the scene. Part 5 picks the answer.

1 Company

WHAT

Who they are, what they sell, who the person is.

HOW TO SPOT IT

The first sentence. A name, job or business. It sets the scene.

2 Problem

WHAT

The pressure: a deadline, a client, a decision.

HOW TO SPOT IT

Words like must, tonight, deadline. It explains the hurry.

3 Actions

WHAT

What the person already asked AI to do, or gaps in the brief.

HOW TO SPOT IT

Phrases like “she asks” or “he gives the AI”. What was said.

4 Workflow

WHAT

What AI produced or did, and what state the job is in now.

HOW TO SPOT IT

What came back, and the next step: “plans to send” or “places the order”.

5 Hidden clue

WHAT

One small detail that quietly decides the answer.

HOW TO SPOT IT

A date, number, source or missing check that does not fit.

MCQ 6

Sunrise Surveying, a 35-person land-surveying firm, has just won a large contract. Office manager Tendai Moyo must equip two survey crews by Monday. To save time, he hands the whole job to an AI agent that can browse supplier sites and use the firm's company card through a payments connector. On Friday evening he writes the brief below and runs it without asking to see a plan first.
Outcome: two laser scanners for the new crews.
Context: we are a 35-person surveying firm; the contract starts Monday.
Constraints: stay within a $40,000 total budget; delivery before Monday week.
Authority: use your judgment on everything.
Deliverable: the scanners ordered.
Verification: I will check the confirmation email.
On Monday he finds a confirmed order with a supplier he has never heard of, a $9,000 non-refundable deposit already charged, and a note saying "I chose the supplier with the fastest delivery." The agent stayed inside the budget and the delivery date. A colleague says the fix is a lower budget cap, a longer list of constraints and a second, stricter verification step.

What is the most accurate diagnosis, and the best fix to the brief?

A. The Constraints line was too thin; adding supplier rules, a lower cap and a stricter confirmation check would stop a repeat.

B. The Verification line failed because it came after the order; a second approver should now check every confirmation email.

C. The Authority line gave open decision rights over a step that spends money; split it so the agent researches and recommends, buys only on his "go", and shows a plan first.

D. The Context line was too short; describing the contract and the crews in more detail would let the agent choose the supplier Tendai would pick.

MCQ 6 · Answer

COMPANY	Sunrise Surveying, a 35-person land-surveying firm. Tendai Moyo is the office manager.
PROBLEM	Equip two survey crews by Monday after winning a large contract.
ACTIONS	He gave the agent a budget and delivery limit, open authority, and permission to order. He ran it without asking for a plan.
WORKFLOW	A supplier was chosen and a $9,000 non-refundable deposit charged. The budget and delivery limits were met.
HIDDEN CLUE	“Use your judgment on everything” gave the agent decision rights over a purchase. The missing boundary sits in Authority.

What is the most accurate diagnosis, and the best fix to the brief?

A. The Constraints line was too thin; adding supplier rules, a lower cap and a stricter confirmation check would stop a repeat.

More constraints miss authority

B. The Verification line failed because it came after the order; a second approver should now check every confirmation email.

Checks happen after the purchase

C. The Authority line gave open decision rights over a step that spends money; split it so the agent researches and recommends, buys only on his "go", and shows a plan first.

✓ CORRECT · Exact rule and fix

D. The Context line was too short; describing the contract and the crews in more detail would let the agent choose the supplier Tendai would pick.

More context misses decision rights

MCQ 7

Northfield Medical Supplies, a distributor with 600 staff, uses Claude in a browser. Procurement analyst Daniela Rossi spends a Tuesday in one single chat building a supplier-scoring sheet. In her first message she wrote: "Never include Vendor K; it failed our audit." By late afternoon, after about 150 messages, the sheet lists Vendor K with a high score. She objects, Claude apologises and removes it, but two hours later Vendor K is back.

A colleague says the AI's memory "gets full and decays like a tired person". Her manager wants IT to retrain the model on the company's audit rules so it stops forgetting, and wants Daniela to keep working in the same chat so no history is lost.

Which explanation and action fit how the tool actually works?

A. The chat outgrew what the window holds, so early turns were trimmed or summarised; put the rule where it is read every time, or restart with a short summary.

B. The model's memory fades as a chat lengthens, so she should repeat the rule more forcefully and carry on in the same chat.

C. Long chats slowly overwrite the model's weights, so IT should retrain the model on the audit rules before she continues.

D. The window is too small for this job, so switching to a model with a million-token window lets her continue unchanged.

MCQ 7 · Answer

COMPANY	Northfield Medical Supplies, 600 staff. Daniela Rossi is the procurement analyst.
PROBLEM	Build a supplier-scoring sheet while excluding Vendor K.
ACTIONS	She stated the rule in her first message and continued for about 150 messages.
WORKFLOW	Vendor K returned even after she objected and Claude removed it.
HIDDEN CLUE	The early rule can leave the context window. Put it where it is read every time, or restart with a short summary.

Which explanation and action fit how the tool actually works?

A. The chat outgrew what the window holds, so early turns were trimmed or summarised; put the rule where it is read every time, or restart with a short summary.

✓ CORRECT · Exact rule and fix

B. The model's memory fades as a chat lengthens, so she should repeat the rule more forcefully and carry on in the same chat.

Human-memory analogy

C. Long chats slowly overwrite the model's weights, so IT should retrain the model on the audit rules before she continues.

Incorrect weights explanation

D. The window is too small for this job, so switching to a model with a million-token window lets her continue unchanged.

More room does not place the rule

MCQ 8

Brightline Communications, a 25-person PR agency, uses Claude every week to draft client reports. Account executive Yusuf Demir has memory switched on. Since March, every new chat he opens assumes that his client Halden is a retail chain. Halden moved into financial services in June. Each week Yusuf writes a longer prompt explaining that Halden is now in fintech, and each week the draft still opens with shop-floor examples.
A teammate suggests he "just add more detail to each prompt" and use incognito for all work from now on. The agency director says the problem proves that AI "cannot learn".

What should Yusuf do first?

A. Write a longer prompt each week with the sector change in bold, since more detail always overrides whatever the tool has stored.

B. Switch every chat to incognito permanently, so nothing the tool has stored about him can reach a draft again.

C. Wait for the model's next update, because the assumption comes from training and a user cannot change it.

D. Open the memory panel, find the note that still says retail, and correct or delete it; then state the change in chat once.

MCQ 8 · Answer

COMPANY	Brightline Communications, a 25-person PR agency. Yusuf Demir is the account executive.
PROBLEM	Draft weekly reports after client Halden moved into financial services.
ACTIONS	Memory was on. He kept writing longer prompts explaining the sector change.
WORKFLOW	Every new chat still assumed retail and used shop-floor examples.
HIDDEN CLUE	The error recurs in new chats. Correct or delete the stale memory note, then state the change once in chat.

What should Yusuf do first?

A. Write a longer prompt each week with the sector change in bold, since more detail always overrides whatever the tool has stored.

Longer prompt misses stored note

B. Switch every chat to incognito permanently, so nothing the tool has stored about him can reach a draft again.

Incognito leaves the note unfixed

C. Wait for the model's next update, because the assumption comes from training and a user cannot change it.

Confuses memory with training

D. Open the memory panel, find the note that still says retail, and correct or delete it; then state the change in chat once.

✓ CORRECT · Exact rule and fix

MCQ 9

Kestrel Youth Sports League has 20 staff. Programme director Imran Sheikh must send the board a quarterly report on attendance and job-placement outcomes by Friday. He gives Claude last quarter's raw data, which he already analysed and trusts, and asks it to reproduce the analysis. Claude's result matches his on every figure.
Delighted, Imran plans to run this quarter's raw data and send Claude's report straight to the board unread. He says: "It passed the test, so I can stop checking, and the board does not need to be told AI was involved." One colleague says passing proves Claude is accurate for all future reports. Another says the test is worthless because the data was old.

What does the test prove, and what should Imran do?

A. It proves Claude is accurate on any future quarter, so he may skip the check and send the report once Friday arrives.

B. It earns confidence for similar future work only; he must still check the new results, stand behind them, and disclose AI help where it matters.

C. It proves nothing, because old data is biased; he should discard the result and write this quarter's report by hand.

D. It proves the data is clean, so any later error must come from his prompt rather than from the assistant's ability.

MCQ 9 · Answer

COMPANY	Kestrel Youth Sports League, 20 staff. Imran Sheikh is the programme director.
PROBLEM	Send a quarterly attendance and job-placement report to the board by Friday.
ACTIONS	He tested Claude on last quarter’s data, whose correct results he already knew.
WORKFLOW	The test matched. He plans to send this quarter’s report unread.
HIDDEN CLUE	Passing earns confidence for similar work. It does not transfer accountability or remove checks on new results.

What does the test prove, and what should Imran do?

A. It proves Claude is accurate on any future quarter, so he may skip the check and send the report once Friday arrives.

Overclaims future accuracy

B. It earns confidence for similar future work only; he must still check the new results, stand behind them, and disclose AI help where it matters.

✓ CORRECT · Exact rule and fix

C. It proves nothing, because old data is biased; he should discard the result and write this quarter's report by hand.

Rejects the known-answer test

D. It proves the data is clean, so any later error must come from his prompt rather than from the assistant's ability.

Does not prove new data is clean

MCQ 10

Hartley Community Foundation is a charity with 30 staff. Grants administrator Nia Okonkwo asks Claude to write and run code that totals the quarter's donations by campaign from a spreadsheet of 1,400 rows. The reply says "ran successfully", shows the Python and a table of totals, and the report covers 1,381 rows. The treasurer says: "It ran, and we can see the code, so it is verified. Send it to the trustees." Nia cannot read Python. One trustee suggests she ask Claude "are you sure?". Another suggests she learn Python and read every line. A third suggests running the same brief in a second AI and sending whichever looks neater.

What should Nia do before the totals go to the trustees?

A. Learn enough Python to read the code line by line, because only code she has read herself can be trusted.

B. Ask Claude whether it is sure about the totals, and send them if it answers yes with a short explanation.

C. Find the 19 missing rows, then run the code on one campaign whose total she already knows from the ledger.

D. Run the brief in a second AI and send the totals both agree on, since agreement removes the need for further checks.

MCQ 10 · Answer

COMPANY	Hartley Community Foundation, 30 staff. Nia Okonkwo is the grants administrator.
PROBLEM	Total 1,400 donation rows by campaign before sending figures to trustees.
ACTIONS	She asked Claude to write and run code. She cannot read Python herself.
WORKFLOW	The code ran successfully, but the report covers only 1,381 rows.
HIDDEN CLUE	19 rows are missing. Reconcile them, then test a campaign whose total she already knows from the ledger.

What should Nia do before the totals go to the trustees?

A. Learn enough Python to read the code line by line, because only code she has read herself can be trusted.

Reading code is not the required check

B. Ask Claude whether it is sure about the totals, and send them if it answers yes with a short explanation.

Confidence is not verification

C. Find the 19 missing rows, then run the code on one campaign whose total she already knows from the ledger.

✓ CORRECT · Exact rule and fix

D. Run the brief in a second AI and send the totals both agree on, since agreement removes the need for further checks.

Agreement can repeat an omitted rule

Answers and Causes · Q1 to Q5

Q1	**B**	Escalate a specific question with evidence. A request to confirm a verdict breaks the method at Step 7.
Q2	**B and D**	Drafting quality does not justify severity decisions. An 8-second review does not staff the gate.
Q3	**C**	A one-off task needs a good prompt. A Skill earns its place through repetition.
Q4	**D**	A lasting rule for one client belongs in that client's Project.
Q5	**A**	Disclosure about AI's role is transparency diligence.

Answers and Causes · Q6 to Q10

Q6	**C**	Authority allowed a purchase. Research and recommend, then purchase only on an explicit go.
Q7	**A**	The rule can leave the context window. Place it where it is read each time or restart with a summary.
Q8	**D**	Correct or delete the stale stored memory note.
Q9	**B**	Passing a known-answer test earns confidence for similar work while the human remains accountable.
Q10	**C**	Reconcile the 19 missing rows and run a known-answer test.

Thank You

Read the ask. Find the rule break. Explain the choice.
