

Scenario MCQ Practice

8 business scenarios. Each hides its answer in one small detail.

Based on the deck **Just Delegate It**: delegation loop, the six-question brief, authority and plan-first, intervening, and verifying before you accept.

RULE	One question per page. Each scenario has five parts: Company, Problem, Actions taken, Workflow and an Exhibit, then the question.
RULE	Four options, one correct. Three options feel right for a wrong reason. Find the smallest move that closes the gap.
RULE	Hunt for the hidden clue. Underline the detail that quietly decides the answer before you read the options.
RULE	Answers are at the end. Do not scroll ahead. Write your letter for each scenario, then check the answer pages and tips.

Your answers

Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8

Scenario 1

COMPANY	Karachi Bay Furnishings is a 60-person furniture exporter. Hina leads procurement and reports to the owner. The company buys timber in bulk for its winter export season.
PROBLEM	Hina must choose one of three timber suppliers and sign a purchase commitment by 6 pm tomorrow. The deposit is non-refundable. She has about 90 minutes today to prepare, because the rest of her day is booked.
ACTIONS TAKEN	She gave Claude a brief: <i>Outcome</i> , a comparison of three suppliers across wood grades; <i>Context</i> , export orders that need consistent quality; <i>Deliverable</i> , a table with unit price, lead time, payment terms and minimum order for each grade. The brief did not mention checking or marking anything.
WORKFLOW	Claude returned a 40-row table. Every row ends with the same note, and a column at the far right was added by Claude itself. The table looks polished and consistent.

EXCERPT OF CLAUDE'S TABLE

Row 7 | Supplier B | Sheesham Grade A | 412 per unit | 21 days | 60% advance | MOQ 200 | Source: supplier website | Confidence: High
 Row 8 | Supplier B | Sheesham Grade B | 371 per unit | 21 days | 60% advance | MOQ 200 | Source: supplier website | Confidence: Medium
 Row 23 | Supplier C | Deodar Grade A | 455 per unit | 14 days | 30% advance | MOQ 150 | Source: supplier website | Confidence: High

Question. Which use of Hina's 90 minutes is the best step before she commits?

A	Check the 10 rows Claude marked "Medium" confidence, since Claude itself has flagged them as weaker.
B	Read all 40 rows from the top, looking for anything that seems unusual, and stop when the time runs out.
C	Choose the figures that decide the commitment for her two shortlisted suppliers (unit price, lead time, payment terms, minimum order), open each source, find the sentence and check its date.
D	Ask Claude to re-verify all 40 rows and list which ones it now rates "High", then rely on that list.

Scenario 2

COMPANY	Northgate Staffing is a recruitment agency with 25 recruiters serving corporate clients. Faisal is the recruitment coordinator. Claude has been given access to the shared candidate inbox to help him.
PROBLEM	Northgate has 140 applicants across six client roles. Several client managers are still deciding, and two finalists for the finance-manager role are on hold while a client reviews budget. Candidates have been asking for updates all week.
ACTIONS TAKEN	Faisal's brief said: <i>Outcome</i> , keep every candidate informed; <i>Context</i> , list of roles and candidate names; <i>Deliverable</i> , status emails by end of day; <i>Verification</i> , none. He then left for a client meeting.
WORKFLOW	When Faisal returned, the shared inbox showed that emails had already been sent. A client manager has since called, upset that a finalist she still wanted was rejected. Faisal opens Claude's activity log.

CLAUDE'S ACTIVITY LOG

10:12 Read candidate list (140)
 10:31 Sent status email to 118 candidates: "Your application is progressing"
 10:44 Sent 9 emails: "Unfortunately we will not be moving forward" (includes 2 finalists, Finance Manager role)
 10:52 Task complete

Question. Faisal wants to prevent this from happening on the next run. Which change to the brief best addresses the real gap?

A	Add an Authority line: Claude may draft candidate emails but must not send any, and it should list its plan first and wait for his "go".
B	Add a longer Context section describing the current hiring stage of all 140 candidates, so Claude has the full picture.
C	Rewrite the job as detailed step-by-step instructions for each email type and each candidate status.
D	Move the job to a stronger model with deeper reasoning so it makes better judgments about who to reject.

Scenario 3

COMPANY	Al-Shifa Pharma Distribution supplies medicines to about 300 pharmacies. Bilal is a junior accounts analyst. The finance head has told him that the external audit team arrives on Monday.
PROBLEM	The shared invoice folder holds around 2,300 files, with duplicated scans and inconsistent names. The auditors will ask for original supplier invoices, and the finance head wants the folder tidy by Friday evening. Bilal has confirmed the folder is fully backed up and that renaming files is acceptable.
ACTIONS TAKEN	Bilal told Claude: "Tidy the invoice folder before the audit." He added: "List your steps first and wait for me to say go." Claude has access to the folder.
WORKFLOW	Claude has produced a plan and is waiting. Bilal is short of time and the plan looks sensible at a glance.

CLAUDE'S PLAN

1. Rename every file to date_vendor_amount.
 2. Permanently delete files that look like duplicates.
 3. Move invoices older than two years into an Archive sub-folder.
 4. Write a short summary of what changed.
- Waiting for your go.

Question. What should Bilal do now?

A	Type "go": the duplicates are obvious and Claude has already asked before acting.
B	Skip the waiting and let Claude start immediately, because the deadline is tight.
C	Ask Claude to add a note marking anything it is unsure about as "unverified", then type "go".
D	Change step 2 so Claude flags and lists the suspected duplicates without deleting anything, then type "go".

Scenario 4

COMPANY	BrightPath Ads is a 15-person digital marketing agency. Mariam is an account manager preparing to pitch a new retail client, who asked in the last meeting how three named competitors price their monthly retainers.
PROBLEM	The pitch is tomorrow morning. Mariam needs a clear picture of how the competitors charge so that BrightPath can position its own price. She has an hour before she must move on to slides.
ACTIONS TAKEN	Mariam wrote one line: "Look at how our competitors approach retainers for the pitch." She did not name what she meant by "approach" or what form the result should take.
WORKFLOW	Claude returned a fluent 900-word document. It covers each competitor's brand story, positioning, and typical client types in detail. Mariam has read it: the facts appear accurate and well written. It contains no prices.

OPENING OF CLAUDE'S DOCUMENT

Competitor 1: founded 2016, positioned as a premium boutique for lifestyle brands...

Competitor 2: known for high-volume social content and quick turnaround...

Competitor 3: emphasises data-led strategy and long client relationships...

Question. Which move fits this situation best?

A	Correct: point out which competitor facts to fix and ask for a revised version.
B	Stop and restate the outcome in one line: a comparison of the three competitors' monthly retainer prices, with sources, and anything unconfirmed marked "unverified".
C	Redirect: tell Claude to tilt the next section a little more toward pricing.
D	Escalate: rerun the same request on a stronger model because the first answer missed the point.

Scenario 5

COMPANY	Zubair's Home Essentials is an online store with about 900 products, run by Zubair and two staff. He uses Claude every Monday to prepare a weekly restock report from his sales export.
PROBLEM	For two months customers have complained about items being out of stock at checkout, and repeat orders are falling. Zubair believes the weekly restock report is being followed correctly, yet the stock-outs continue.
ACTIONS TAKEN	His standing brief says: "List the 12 items to restock this week, ranked by highest units sold last month." Claude follows this exactly each Monday and every figure has been checked against his sales export.
WORKFLOW	Zubair audits the last eight weeks. Every top-12 list was accurate. But the items that actually ran out were slow sellers with high margins and three-week supplier lead times. None of them ever appeared in the top 12.

ZUBAIR'S AUDIT NOTES

Week 5 top 12: all fast movers, all in stock

Ran out in week 5: Ceramic Planter Set (18 units/mo, margin 46%, lead time 21 days)

Ran out in week 7: Cast-Iron Skillet (22 units/mo, margin 41%, lead time 21 days)

Question. What is the best move now?

A	Correct: tell Claude that the ranking numbers are wrong and ask it to fix them.
B	Escalate to a stronger model so it can discover the missing items on its own.
C	Change the requirement and say so: the old ranking is replaced by restock priority based on days of stock left against supplier lead time, with margin as the tie-breaker.
D	Take the job back and build the report manually each week.

Scenario 6

COMPANY	Ravi & Co. is a 30-person accounting firm. Nadia is the operations manager. One of the firm's clients is renewing a managed-services contract and the partners want the exit terms before a meeting.
PROBLEM	The meeting starts in 40 minutes. Nadia has the full 12-page contract text but no time to read it all. Any termination notice period or fee she quotes to the partners will be used in a negotiation.
ACTIONS TAKEN	She pasted the entire contract into Claude, including the signature page with the client director's national ID number and a bank IBAN, and asked: "What are the termination terms?"
WORKFLOW	Claude answered with a confident summary. Nadia searches the pasted text for those words and finds a different figure for notice, and nothing at all about a fee.
WHAT NADIA FOUND Claude: "Either party may terminate with 30 days' written notice. Early termination carries a fee of 10% of the remaining contract value." Clause 14.2 in the contract: "...by giving not less than sixty (60) days' written notice." Search for "fee" or "10%" in termination clauses: no match.	

Question. Which next step best fixes both the answer and the way the job was set up?

A	Remove the personal identifiers from the pasted text, then re-ask: "Using only the text below, give the termination terms and quote the sentence you used for each. If it is not in the text, say 'not in the source'."
B	Keep the 30-day notice because it is the industry norm, and only correct the fee line.
C	Ask Claude to search the web for typical termination terms in similar contracts to cross-check.
D	Ask Claude how confident it is in each figure and keep the ones it rates highly.

Scenario 7

COMPANY	MediLink Clinics operates six family clinics. Sara is the operations lead. Every Monday she needs a one-page summary of patient feedback gathered over the previous week.
PROBLEM	Feedback arrives in different forms across the six clinics. The summary goes to the clinic managers, so it must always flag refund-related comments and must never include a patient's name.
ACTIONS TAKEN	Week 1 she wrote a long brief. Week 2 she pasted the same brief again and saved a copy in her notes app. Today, week 3, she is about to paste it a third time, upload the same three policy PDFs (refund policy, complaint process, tone guide), and retype two rules: "Flag every mention of refunds" and "Never name a patient".
WORKFLOW	Each week the results are good, but Sara spends ten minutes setting the job up, and last week she forgot to retype the second rule. One summary went out with a patient's name in it.
SARA'S MONDAY ROUTINE Setup each Monday: paste brief, upload 3 PDFs, retype 2 rules. Last week: the "never name a patient" rule was forgotten.	

Question. Which step is best for Sara now?

A	Keep pasting the brief, but shorten it so setup is quicker.
B	Create a Project: upload the two rules as knowledge files and put the three policy PDFs into the standing instructions.
C	Save the brief in a note outside the chat and keep uploading the three PDFs every Monday.
D	Create a Project: add the three policy PDFs as knowledge, and write the two rules as standing instructions.

Scenario 8

COMPANY	Horizon Solar Installers fits rooftop solar for homes and public buildings. Ali is the sales manager and is finishing a proposal for a municipal client, whose procurement officer reads every claim closely.
PROBLEM	The proposal goes out tomorrow morning and includes a page of twelve performance statistics. Ali cannot afford even one unsupported claim, but he also cannot redo the whole page tonight.
ACTIONS TAKEN	His brief asked Claude for twelve supporting statistics, each with a link, and said: "Mark anything you cannot confirm as unverified." Ali then traced every statistic himself: opened each link, found the sentence, checked the date.
WORKFLOW	Eleven statistics match their sources and are current. The twelfth, "panels degrade by less than 0.5% per year", links to a manufacturer's warranty page. The page discusses long-term performance in general terms but has no degradation figure anywhere. Claude did not mark it unverified.

THE TWELFTH STATISTIC

Claude: "Panels degrade by less than 0.5% per year. [link]"

Page found at the link: "...our panels are built for long-term performance and come with a 25-year warranty..."

No degradation percentage on the page.

Question. Which decision fits this one statistic best?

A	Accept: the page is from a reputable manufacturer and is on the right topic.
B	Investigate: the evidence is incomplete, so trace it again to find where the exact figure comes from, and leave it out unless it can be confirmed.
C	Correct: replace it with 0.8% per year, which Ali remembers from an earlier project.
D	Reject: take the whole job back because one of the twelve failed.

Answer key

Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8
C	A	D	B	C	A	D	B

Q1. Answer C (Verify: Identify, then Trace)

Hidden clue: "Non-refundable" + "90 minutes" + a "Confidence" column that Claude added itself.

Why it is right: The deposit cannot be refunded and time is short, so verification has to be aimed. Identify the parts that matter and are hard to reverse, then trace them to a source you can open and date-check. That is exactly what C does.

A (Trusting move): Claude's confidence column is a self-rating, not evidence. "High" rows could still be wrong, and "Medium" ones could be fine.

B (Nervous move): Looks diligent but spends the time on rows that do not drive the decision, and never opens a source.

D (Over-reaction move): Asking Claude to grade its own work gives a fresh opinion, not a check against a source.

Rule to remember: Verify what matters and is hard to reverse. Trace to the source; a confidence label is not a source.

Q2. Answer A (Authority: draft, do not send)

Hidden clue: "Verification: none" and an unattended run that sent 127 emails.

Why it is right: The outcome and context were fine. What was missing was a boundary: sending is a promise and cannot be undone. "Draft, do not send" plus plan-first turns Claude's judgment calls into things Faisal can review before they leave the building.

B (Nervous move): More context could have helped Claude decide better, but nothing would stop it from sending. The gap is permission, not information.

C (Nervous move): Step-by-step scripts are what people write out of worry; they are long, brittle and still silent about who may send.

D (Over-reaction move): A stronger model that is still allowed to send can make the same mistake more confidently.

Rule to remember: Sending makes a promise. Silent AI decisions mean the Authority line is missing.

Q3. Answer D (Authority: plan-first, inspect not delete)

Hidden clue: "Permanently delete" in a folder that auditors will ask originals from.

Why it is right: Plan-first works because Bilal can change one step before anything happens. Step 2 is the only one that destroys evidence, and the auditors want originals. Edit that step to inspect and flag, then approve.

A (Trusting move): "Looks like duplicates" is Claude's judgment. Deleting on that basis is a decision nobody reviewed.

B (Over-reaction move): Abandoning plan-first is an authority failure in miniature and removes the only checkpoint.

C (Nervous move): Marking uncertainty is useful, but it still leaves permanent deletion in the plan.

Rule to remember: Inspect, do not delete: deleting destroys evidence. Change one step, then say go.

Q4. Answer B (Intervene: wrong question)

Hidden clue: "Facts appear accurate" and "contains no prices": nothing wrong, wrong topic.

Why it is right: The output is accurate but it answers a different question, because the brief never said what "approach" meant. The move for that symptom is to stop and restate the outcome in one line, including form and verification.

A (Nervous move): Nothing is factually wrong, so there is no error to correct. Fixing facts would polish the wrong document.

C (Nervous move): Redirect is for a job that is heading the wrong way but is not wrong yet. Here the whole piece is about something else.

D (Over-reaction move): Level was not the problem. The same vague request on a stronger model returns a better answer to the same wrong question.

Rule to remember: Different question answered? Stop and restate the outcome in one line.

Q5. Answer C (Intervene: the job itself was wrong)

Hidden clue: "Every figure checked" + stock-outs among slow, high-margin, long lead-time items.

Why it is right: Claude did exactly what it was asked and the numbers are right. The job itself was wrong: it ranked by sales, but stock-outs come from lead time and days of stock. The move is to change the requirement, say plainly that it replaces the old one, and then record it in the brief.

A (Nervous move): The numbers are not wrong, so there is no error to name.

B (Over-reaction move): A stronger model given the same requirement will produce the same top-12 list, only more elegantly.

D (Over-reaction move): Nothing has failed at the task itself. Taking the job back is the last rung, used when moves keep failing.

Rule to remember: If AI did what you asked and the result is still wrong, the job was wrong. Change the requirement and say so.

Q6. Answer A (Source: stay inside the text)

Hidden clue: Figures that appear nowhere in the pasted text, and an ID number and IBAN sitting in it.

Why it is right: The 30 days and the 10% fee did not come from the pasted text. They came from memory and sounded just as sure. A stays inside the source, asks for the supporting sentence, allows "not in the source" as an answer, and removes private data before it is used again.

B (Trusting move): "Standard" is exactly the remembered-fact trap: the contract says sixty days.

C (Nervous move): General web terms cannot tell Nadia what this contract says. It swaps one unsourced answer for another.

D (Nervous move): A confidence rating is not a quoted sentence. It would still mix remembered and read content.

Rule to remember: Stay inside the text, quote the sentence, and remove private data first. "Not in the source" is a good answer.

Q7. Answer D (Repeat jobs: Project)

Hidden clue: "Third time" and a rule forgotten in the last run.

Why it is right: It is the third time, which is the point to move the context into a Project. Knowledge is what AI may read (the policy PDFs). Standing instructions are what AI must do every time (flag refunds, never name a patient). D matches each item to its home.

A (Nervous move): A shorter brief is still manual, and it does not stop a rule from being forgotten.

B (Nervous move): The two categories are swapped: rules that must always apply belong in standing instructions, documents to read belong in knowledge.

C (Nervous move): Saving the brief outside chat was the right move on the second time. By the third, the context should live in a Project.

Rule to remember: 2nd time: save the brief outside the chat. 3rd time: a Project. Knowledge = may read; standing instructions = must do every time.

Q8. Answer B (Verify: four decisions)

Hidden clue: "Discusses long-term performance in general terms" but "no degradation figure anywhere".

Why it is right: Verification ends in a human decision, and there are four. Here the source is related but the claim is not on it, so evidence is incomplete: Investigate. Ali traces again and includes the number only if he can confirm it, otherwise the proposal says less.

A (Trusting move): A citation is not verification. Checking the citation is, and this check failed.

C (Trusting move): Correct is for a known specific error. A number from memory has no source either.

D (Over-reaction move): Eleven of twelve checked out. Rejecting the whole job discards work that passed verification.

Rule to remember: Related page, missing claim: the evidence is incomplete. Investigate, do not accept and do not guess.

How to find the hidden answer

1	Split the story into five parts. Company, Problem, Actions, Workflow, Exhibit. The clue is almost never in the Company paragraph, and often in the Exhibit.
2	Place it on the loop. Not started (brief gap), mid-work (symptom), or result arrived (verify, then decide).
3	Name the symptom before the options. Different question, one wrong fact, drifting, wrong job, wrong level, keeps failing. Each has exactly one move.
4	Read the verbs for boundaries. Purchase, send, delete, silent choice. Whenever AI crossed one, the Authority line is the answer.
5	Looked or remembered? A fact with no source you can open, or not in the pasted text, came from memory. Trace it.
6	Eliminate by shape. Trusting (accept it), Nervous ("are you sure?", more background, rewrite all), Over-reaction (rerun, take it back). The survivor is the smallest move that closes the gap.
7	Confidence is not evidence. Self-ratings, "are you sure?" and citations without checking never count as verification.
8	Repeat jobs. 2nd time: save the brief outside the chat. 3rd time: a Project. Knowledge is what AI may read; standing instructions are what it must do every time.

Remember: AI doing the work does not transfer accountability to AI.
