PCAO-F EXAM PREP

Cracking Tabular & Scenario-Based MCQs

ROW and the 5-part method, with 10 practice questions (Select TWO)

Created by AI & Mentors team

ROW · The reading method

For tabular questions, the ask determines which rule break counts.

R Read the ask

Underline FIRST, TWO or wrong label.

FIRST: stop at the earliest rule break.

TWO: inspect every row and select two.

Wrong label: test the definition.

O Open each row

Test each row against its rule.

Does it match the rule exactly?

Mark OK or wrong.

A professional tone proves nothing.

W Whittle the options

Remove options that fix a later row.

Remove extremes and wrong rules.

Keep the option that names the exact rule break.

For Select TWO, both picks must name real rule breaks.

The wrong step is usually a true-sounding sentence that quietly breaks one rule.

The 5 Parts of Every Scenario

Parts 1 to 4 set the scene. Part 5 picks the answer.

1 Company

WHAT

Who they are, what they sell, who the person is.

HOW TO SPOT IT

The first sentence: a name, a job or a business.

2 Problem

WHAT

The pressure: a deadline, a client, a decision.

HOW TO SPOT IT

Words like must, tonight, deadline. It explains the hurry.

3 Actions

WHAT

What the person already asked AI to do, or gaps in the brief.

HOW TO SPOT IT

Phrases like “she asks” or “he gives the AI”.

4 Workflow

WHAT

What AI produced or did, and what state the job is in now.

HOW TO SPOT IT

What came back, and the next step: “plans to send”.

5 Hidden clue

WHAT

One small detail that quietly decides the answer.

HOW TO SPOT IT

A date, number, source or missing check that does not fit.

Read the story in these five parts. The hidden clue (part 5) decides which two options are right.

MCQ 1

TABULAR · ROW method

Lakeside Dental Group (about 60 staff): front-desk setup. Mara Qureshi runs the front desk. She logs each repeated friction she felt, what she set up in Claude, and why. The rest of the front-desk team will copy her setup.

#	The friction she felt	What she set up	Her reason
1	I retype our reminder wording, tone and sign-off into every patient message.	A Skill holding the house reminder style	I keep re-explaining how
2	I copy this week's bookings from the booking app into a message.	A booking-app connector, read-only, scoped to this week's calendar	I keep fetching data from another app
3	Every Friday I need cancellations from the tracker in our fixed summary layout.	A tracker connector (read-only) plus a Skill for the layout	The job needs the data and the format
4	The practice owner wanted one farewell note for a retiring dentist. I will not write another.	A new Skill, so the note is saved	It might be useful later
5	I need last week's supplier invoices from one Drive folder.	A Drive connector with write access to the whole drive	I will never have to change it
6	A supplier emailed me a zip file for ordering.	Asked IT who published it and read its SKILL.md before installing	An unknown sender is not a trusted source

Which TWO rows depart from what the course teaches? (Select TWO)

A. Row 4, because a task done once is a good prompt, and a Skill earns its place only by repeating.

B. Row 2, because a read-only connector should never be used for calendar data.

C. Row 5, because a one-folder job was given write access to the whole drive instead of the smallest scope.

D. Row 3, because a job needing data and a format should use a Skill alone.

MCQ 1 · Answer

TABULAR · ROW method

Correct answers: A and C

Skills & Connectors · Select TWO

R · Read the ask: Ask = TWO + “depart”. Do not stop at the first break. Mark every row OK or wrong, then pick the two that fail.

#	The friction she felt	What she set up	Her reason	Verdict (O: open each row)
1	I retype our reminder wording, tone and sign-off into every patient message.	A Skill holding the house reminder style	I keep re-explaining how	**OK: re-explaining how = Skill**
2	I copy this week's bookings from the booking app into a message.	A booking-app connector, read-only, scoped to this week's calendar	I keep fetching data from another app	**OK: data = Connector, read-only, smallest scope**
3	Every Friday I need cancellations from the tracker in our fixed summary layout.	A tracker connector (read-only) plus a Skill for the layout	The job needs the data and the format	**OK: data + format = both**
4	The practice owner wanted one farewell note for a retiring dentist. I will not write another.	A new Skill, so the note is saved	It might be useful later	**WRONG: a one-off task is just a good prompt; a Skill needs repetition**
5	I need last week's supplier invoices from one Drive folder.	A Drive connector with write access to the whole drive	I will never have to change it	**WRONG: smallest scope (one folder) and start read-only**
6	A supplier emailed me a zip file for ordering.	Asked IT who published it and read its SKILL.md before installing	An unknown sender is not a trusted source	**OK: source checked, SKILL.md read**

W · Whittle the options

A. Row 4, because a task done once is a good prompt, and a Skill earns its place only by repeating.

KEEP: names the exact rule break (one-off task).

B. Row 2, because a read-only connector should never be used for calendar data.

KILL: looks wrong, is fine. Read-only and scoped to one calendar is correct.

C. Row 5, because a one-folder job was given write access to the whole drive instead of the

D. Row 3, because a job needing data and a format should use a Skill alone.

MCQ 2

TABULAR · ROW method

Maplewood Logistics (about 180 staff): invoice disputes. Rashid Khan is a billing associate. About 400 disputes arrive each week. He has mapped the workflow and wants to move most steps to Claude. Read every column, including who sees each output next.

#	Step	Owner	Stated reason	Carried by	Who sees the output next
1	Pull the invoice and delivery note	AI	Mechanical retrieval	Connector	Claude at step 2
2	Decide whether to accept the dispute	Collaborative	AI recommends, the clerk reviews each	Skill + clerk	Clerk: 400 recommendations this week, about 6 seconds each
3	Compute the credit owed	AI	Reversible; checked at row 4	Code execution	Billing lead, who approves each credit against the rate table
4	Approve the credit	Human	The decision the billing lead answers for	Billing lead	Finance system, which pays on approval
5	Send the credit note to the customer	AI	Customers like fast replies	Skill	The customer; nobody re-reads it, and it cannot be undone
6	Log the outcome in the tracker	AI	Mechanical and reversible	Connector	Weekly report read by the billing lead

Which TWO rows show the most serious problems in this map? (Select TWO)

A. Row 3

B. Row 2

C. Row 6

D. Row 5

MCQ 2 · Answer

TABULAR · ROW method

Correct answers: B and D

Workflow Design & Diagnosis · Select TWO

R · Read the ask: Ask = TWO + "most serious". Read every column, including who sees the output next. Both picks must be real rule breaks.

#	Step	Owner	Stated reason	Carried by	Who sees the output next	Verdict (O: open each row)
1	Pull the invoice and delivery note	AI	Mechanical retrieval	Connector	Claude at step 2	**OK: mechanical, reversible**
2	Decide whether to accept the dispute	Collaborative	AI recommends, the clerk reviews each	Skill + clerk	Clerk: 400 recommendations this week, about 6 seconds each	**WRONG: unstaffed gate; 6 seconds is a glance and a click**
3	Compute the credit owed	AI	Reversible; checked at row 4	Code execution	Billing lead, who approves each credit against the rate table	**OK: reversible, checked at row 4**
4	Approve the credit	Human	The decision the billing lead answers for	Billing lead	Finance system, which pays on approval	**OK: the decision stays human**
5	Send the credit note to the customer	AI	Customers like fast replies	Skill	The customer; nobody re-reads it, and it cannot be undone	**WRONG: irreversible step given to AI; sending is human-owned**
6	Log the outcome in the tracker	AI	Mechanical and reversible	Connector	Weekly report read by the billing lead	**OK: mechanical, reversible**

W · Whittle the options

A. Row 3

KILL: looks wrong, is fine. Reversible and checked at the very next row.

B. Row 2

KEEP: an unstaffed review gate (400 reviews at 6 seconds each).

C. Row 6

KILL: mechanical and reversible; nothing to fix.

D. Row 5

KEEP: sending cannot be undone, so it must stay human-owned.

MCQ 3

TABULAR · ROW method

Pinewood Recruitment (about 45 staff): weekly hiring admin. Tariq Mahmood is a recruiter. He is handing the work to Claude on the web and has recorded each job, how the agent reaches it, and where any lasting rule is kept.

#	Job	Reach path and approval mode	Lasting rule or fact, and where it is kept
1	Pull candidate CVs for open roles	ATS connector, read-only, scoped to open roles	None
2	Collect salary benchmarks from a public site (no connector exists)	Built-in browser, Manual approval while he learns the site	None
3	Send offer emails (they cannot be recalled)	Email connector, send, Auto mode	None
4	Draft the weekly update for client Brightwater	Email connector, draft only	“Brightwater wants bullets and no salary figures”: saved in the Brightwater Project instructions
5	Draft candidate messages for all clients	Chat with a Skill, no connectors	“Always address candidates by first name”: saved in the Brightwater Project only
6	Run the whole sequence every Monday	Scheduled after he walked it by hand twice	None

Which TWO rows depart from what the course teaches? (Select TWO)

A. Row 3, because an action that cannot be undone needs Manual approval (or draft only), not Auto.

B. Row 6, because a workflow should never be scheduled.

C. Row 2, because a browser should never be used when a connector might exist one day.

D. Row 5, because a rule for every client is stored in one client's Project instead of a broader layer.

MCQ 3 · Answer

TABULAR · ROW method

Correct answers: A and D

General Agents on the Web · Select TWO

R · Read the ask: Ask = TWO. Test both things in each row: how the agent reaches the job (and approval), and which layer holds each lasting rule.

#	Job	Reach path and approval mode	Lasting rule or fact, and where it is kept	Verdict (O: open each row)
1	Pull candidate CVs for open roles	ATS connector, read-only, scoped to open roles	None	**OK: connector exists, read-only, smallest scope**
2	Collect salary benchmarks from a public site (no connector exists)	Built-in browser, Manual approval while he learns the site	None	**OK: no connector, so the browser is the right rung**
3	Send offer emails (they cannot be recalled)	Email connector, send, Auto mode	None	**WRONG: cannot be recalled; Manual approval (or draft only)**
4	Draft the weekly update for client Brightwater	Email connector, draft only	“Brightwater wants bullets and no salary figures”: saved in the Brightwater Project instructions	**OK: a one-client rule sits in that client's Project**
5	Draft candidate messages for all clients	Chat with a Skill, no connectors	“Always address candidates by first name”: saved in the Brightwater Project only	**WRONG: a rule for every client does not belong in one client's Project**
6	Run the whole sequence every Monday	Scheduled after he walked it by hand twice	None	**OK: walked by hand before scheduling**

W · Whittle the options

A. Row 3, because an action that cannot be undone needs Manual approval (or draft only), not Auto.

KEEP: names the exact approval rule.

B. Row 6, because a workflow should never be scheduled.

KILL: scheduling after walking it by hand is what the course teaches.

C. Row 2, because a browser should never be used when a connector might exist one day.

KILL: wrong rule. Connector first applies only when one exists. None does.

D. Row 5, because a rule for every client is stored in one client's Project instead of a broader layer.

KEEP: names the exact layer rule (narrowest layer that applies).

MCQ 4

TABULAR · ROW method

Bluebell Credit Union (about 150 staff): FileSummary. Ayesha Raza (member services) proposes an AI Skill, FileSummary, that drafts a one-page summary of each loan file for the loan officer. About 900 applications arrive each quarter. Summaries are used only after the loan officer checks them. She applies the four-question method and records every step. Company facts: national ID numbers are regulated; Bluebell AI Workspace is approved for names, contact details and income bands; the regulator requires telling applicants if automated tools take part.

#	Question	What the associate recorded
1	Case	Appropriate with review. Gate: before any summary is used, the loan officer checks it against the application file.
2	Data	Red at first (national ID numbers). Summaries need income band and loan amount, so a script masked the IDs. I scanned the text (3 strays, masked) and kept no key. The remainder is Yellow. Route: Bluebell AI Workspace.
3	Capability: Source	A forum post recommended FileSummary. The page looked official and had good reviews, so I installed it.
4	Capability: Reach, Fit, Actions	A Skill uses everything my session reaches. The job only needs to read files, so email is disconnected and the records system is read-only.
5	Capability: Outside content	Applicants write the free-text notes, so I recorded them as outside content. The Skill only writes a summary that a human reads, so it has no action to hijack.
6	People: Fairness and disclosure	I sampled 40 summaries for local names and 40 for non-local names. The non-local ones were short more often (11 of 40 vs 4 of 40). The regulator requires telling applicants, and the form now says automated tools take part.
7	People: Escalation	I wrote to the governance lead: “Non-local names get shorter summaries (11 of 40 vs 4 of 40). Evidence attached. Is it acceptable to proceed, or should we pause?”
8	Record	One page with who / what / when. Failure threshold: “about 3%” (my estimate). Residual risk: “low”.

Which TWO steps depart from the method taught in the chapter? (Select TWO)

A. Step 8, because the threshold and residual risk were estimates instead of being marked OPEN QUESTION and routed.

B. Step 6, because a gap between local and non-local names means the use case must stop.

C. Step 3, because a forum post and a good-looking page is not a confirmed source; ask the publisher.

D. Step 5, because free text written by applicants should never be read by the Skill.

MCQ 4 · Answer

TABULAR · ROW method

Correct answers: A and C

Governance, Risk & Responsible Use · Select TWO

R · Read the ask: Ask = TWO + "depart". Not just the first break: inspect all 8 steps, and remember a pattern found is a signal, not an error.

#	Question	What the associate recorded	Verdict (O: open each row)
1	Case	Appropriate with review. Gate: before any summary is used, the loan officer checks it against the application file.	**OK: who, what, when gate**
2	Data	Red at first (national ID numbers). Summaries need income band and loan amount, so a script masked the IDs. I scanned the text (3 strays, masked) and kept no key. The remainder is Yellow. Route: Bluebell AI Workspace.	**OK: masked, scanned, Yellow routed**
3	Capability: Source	A forum post recommended FileSummary. The page looked official and had good reviews, so I installed it.	**WRONG: confirm the source with the publisher**
4	Capability: Reach, Fit, Actions	A Skill uses everything my session reaches. The job only needs to read files, so email is disconnected and the records system is read-only.	**OK: session narrowed**
5	Capability: Outside content	Applicants write the free-text notes, so I recorded them as outside content. The Skill only writes a summary that a human reads, so it has no action to hijack.	**OK: outside content, no actions, human reader**
6	People: Fairness and disclosure	I sampled 40 summaries for local names and 40 for non-local names. The non-local ones were short more often (11 of 40 vs 4 of 40). The regulator requires telling applicants, and the form now says automated tools take part.	**OK: both ends sampled, disclosure done**
7	People: Escalation	I wrote to the governance lead: "Non-local names get shorter summaries (11 of 40 vs 4 of 40). Evidence attached. Is it acceptable to proceed, or should we pause?"	**OK: question + evidence escalated**
8	Record	One page with who / what / when. Failure threshold: "about 3%" (my estimate). Residual risk: "low".	**WRONG: guesses must be OPEN QUESTION, routed**

W · Whittle the options

A. Step 8, because the threshold and residual risk were estimates instead of being marked OPEN QUESTION and routed.

KEEP: names the exact rule break.

B. Step 6, because a gap between local and non-local names means the use case must stop.

KILL: too strict. A pattern is a signal: look closer and escalate.

C. Step 3, because a forum post and a good-looking page is not a confirmed source; ask the publisher.

KEEP: source is confirmed with the publisher directly.

D. Step 5, because free text written by applicants should never be read by the Skill.

KILL: looks wrong, is fine. Outside content + no actions + human reader is routine.

MCQ 5

TABULAR · ROW method

Orchard Hotels (about 200 staff): job-offer letters. Daniyal Sheikh is an HR coordinator. This week Claude drafted offer letters for 120 new hires. He kept a log and labelled each entry with one of the 4Ds (Delegation, Description, Discernment, Diligence).

#	Day	What Daniyal did	His label
1	Mon	Decided Claude drafts the letters, but he decides who receives an offer	Delegation
2	Mon	Gave Claude the template, the tone, and a rule never to state a salary outside the approved band	Description
3	Tue	Checked each salary in the drafts against the approved band sheet	Diligence
4	Wed	Removed home addresses from the file because the drafts needed only names and roles	Diligence
5	Thu	Noticed he was rewriting Claude's opening paragraph every time and asked whether the setup still saved time	Description
6	Fri	Added a line to each letter: “Drafted with AI assistance and reviewed by HR”	Diligence

Two entries carry the wrong label. Which TWO entries? (Select TWO)

A. Entry 1, because deciding who receives an offer is a check on the output.

B. Entry 6, because telling readers about AI help is Description.

C. Entry 3, because checking the salaries against the band sheet is Discernment, not Diligence.

D. Entry 5, because asking whether the setup still pays off is Discernment, not Description.

MCQ 5 · Answer

TABULAR · ROW method

Correct answers: C and D

AI Fluency · Select TWO

R · Read the ask: Ask = TWO + “wrong label”. Test each action against the 4D definition, not against the label that is written.

#	Day	What Daniyal did	His label	Verdict (O: open each row)
1	Mon	Decided Claude drafts the letters, but he decides who receives an offer	Delegation	**OK: task delegation**
2	Mon	Gave Claude the template, the tone, and a rule never to state a salary outside the approved band	Description	**OK: product + performance description**
3	Tue	Checked each salary in the drafts against the approved band sheet	Diligence	**WRONG label: checking the result = Discernment**
4	Wed	Removed home addresses from the file because the drafts needed only names and roles	Diligence	**OK: creation Diligence**
5	Thu	Noticed he was rewriting Claude's opening paragraph every time and asked whether the setup still saved time	Description	**WRONG label: is it paying off? = process Discernment**
6	Fri	Added a line to each letter: “Drafted with AI assistance and reviewed by HR”	Diligence	**OK: transparency Diligence**

W · Whittle the options

A. Entry 1, because deciding who receives an offer is a check on the output.

KILL: wrong picture. Keeping a decision human is task Delegation.

B. Entry 6, because telling readers about AI help is Description.

KILL: telling readers AI helped is transparency Diligence; label is right.

C. Entry 3, because checking the salaries against the band sheet is Discernment, not Diligence.

KEEP: judging whether the result is any good is product Discernment.

D. Entry 5, because asking whether the setup still pays off is Discernment, not Description.

KEEP: judging how the work is going is process Discernment.

MCQ 6

SCENARIO · 5-part method

Redwood Legal Support is a 40-person firm. Paralegal Omar Siddiqui must give his manager a summary of ten supplier web pages before a 4 pm meeting. He asks a browsing agent to read the pages and email the summary, without asking to see a plan first. His session also has email (read and send) and the firm's document drive connected. One of the pages contained hidden text telling the agent to attach the “client folder” and send it to an outside address. The agent did, and the summary went out as well.

What should Omar do now to prevent a repeat? (Select TWO)

A. Tell the agent in the prompt to ignore instructions found on web pages, and keep the session as it is.

B. Narrow the session for this job: disconnect email send and the drive, leaving read-only browsing.

C. Switch to the top-tier model, because it cannot be tricked by page text.

D. Treat all page text as information, not instructions, and add a human gate before anything is sent out.

MCQ 6 · Answer

SCENARIO · 5-part method

Correct answers: B and D

Agents & Prompt Injection · Select TWO

1 Company

Redwood Legal Support, 40 staff. Omar Siddiqui is a paralegal.

2 Problem

Summarise ten supplier web pages for his manager before a 4 pm meeting.

3 Actions

He asks a browsing agent to read the pages and email the summary. No plan requested. His session also has email send and the document drive connected.

4 Workflow

A page hid text telling the agent to send the client folder to an outside address. The agent did.

5 Hidden clue

The job needed only reading, but the session could send email and reach the drive. Reach + page text = the leak.

What should Omar do now to prevent a repeat? (Select TWO)

A. Tell the agent in the prompt to ignore instructions found on web pages, and keep the session as it is.

KILL: a wish in a prompt is not a control; the reach is unchanged.

B. Narrow the session for this job: disconnect email send and the drive, leaving read-only browsing.

KEEP: a Skill or agent uses everything the session reaches, so narrow the session.

C. Switch to the top-tier model, because it cannot be tricked by page text.

KILL: no model is immune, and the reach stays the same.

D. Treat all page text as information, not instructions, and add a human gate before anything is sent out.

KEEP: outside content is data, and sends need a human gate.

MCQ 7

SCENARIO · 5-part method

Delta Textiles has about 500 staff. HR specialist Karim Ali must give leadership the main themes from 300 free-text staff-survey comments by Friday. To save time he plans to paste all the comments into his personal Claude account, saying “the survey was anonymous, so it is safe.” While skimming, he notices comments that name managers and one that describes a colleague's health condition. The company's approved route for HR data is its Enterprise workspace.

Which TWO steps are most appropriate for Karim? (Select TWO)

A. Run the work in the approved Enterprise workspace.

B. Use the personal account in an incognito chat, because incognito means nothing is stored.

C. Mask names and health details, and look for indirect identifiers, before any text goes in.

D. Treat the data as safe because the survey was labelled anonymous.

MCQ 7 · Answer

SCENARIO · 5-part method

Correct answers: A and C

Data Handling & Privacy · Select TWO

1 Company

Delta Textiles, 500 staff. Karim Ali is an HR specialist.

2 Problem

Leadership wants themes from 300 free-text survey comments by Friday.

3 Actions

He plans to paste all comments into his personal Claude account: “The survey was anonymous, so it is safe.”

4 Workflow

Skimming, he sees comments naming managers and a colleague's health condition. The approved HR route is the Enterprise workspace.

5 Hidden clue

Free text can identify people. The word “anonymous” does not make it safe: use the approved route and mask first.

Which TWO steps are most appropriate for Karim? (Select TWO)

A. Run the work in the approved Enterprise workspace.

KEEP: the approved route for this data.

B. Use the personal account in an incognito chat, because incognito means nothing is stored.

KILL: incognito does not turn a personal account into an approved route.

C. Mask names and health details, and look for indirect identifiers, before any text goes in.

KEEP: free text can still point to one person.

D. Treat the data as safe because the survey was labelled anonymous.

KILL: a label proves nothing about what the comments contain.

MCQ 8

SCENARIO · 5-part method

Zafar Imports is a 30-person firm. Compliance officer Hina Baig must put the current customs duty on ceramic tiles into a client email today. With web search on, she asks Claude for the current duty. Claude gives a percentage with one link and marks it “unverified.” She opens the link: it is a trade-blog post dated 2022. She plans to paste the rate into the email as it is.

Which TWO actions are most appropriate before the email goes out? (Select TWO)

A. Open the cited page and check its date and wording against the current official tariff notice.

B. Keep the rate and tell the client it came from an AI, which makes it safe to send.

C. Ask Claude to search again and send the rate if the second answer matches the first.

D. Hold the email until the rate is confirmed from the official notice, and keep the “unverified” label until then.

MCQ 8 · Answer

SCENARIO · 5-part method

Correct answers: A and D

Verification & Web Search · Select TWO

1 Company	2 Problem	3 Actions	4 Workflow	5 Hidden clue
Zafar Imports, 30 staff. Hina Baig is the compliance officer.	A client email today must state the customs duty on ceramic tiles.	With web search on, she asks Claude for the current duty. Claude gives a rate, one link, and marks it “unverified”.	The link is a trade-blog post dated 2022. She plans to paste the rate into the email.	**A 2022 blog and an “unverified” flag. Duty schedules change, so confirm against the current official notice.**

Which TWO actions are most appropriate before the email goes out? (Select TWO)

A. Open the cited page and check its date and wording against the current official tariff notice.

KEEP: verify the source, not just the answer.

B. Keep the rate and tell the client it came from an AI, which makes it safe to send.

KILL: disclosure is not verification.

C. Ask Claude to search again and send the rate if the second answer matches the first.

KILL: agreement can repeat the same stale source.

D. Hold the email until the rate is confirmed from the official notice, and keep the “unverified” label until then.

KEEP: flagged claims stay flagged until checked.

MCQ 9

SCENARIO · 5-part method

Silverline Travel is a 25-person agency. Team lead Marco D'Souza wants consistent answers to visa questions. He built one Claude Project with last year's 60-page visa policy uploaded as a knowledge file and one standing instruction: “Be helpful.” Nobody was named to keep the file up to date. Colleagues answer customers from the Project, but they quote different fees, and one customer was quoted a fee that changed last month.

Which TWO changes will best fix the problem? (Select TWO)

A. Ask each colleague to type “use the latest information” at the start of every chat.

B. Create a separate Project for each colleague so versions never clash.

C. Replace the old file with the current policy and name an owner and a review date.

D. Add “Never quote a fee; link to the fees page” to the Project instructions.

MCQ 9 · Answer

SCENARIO · 5-part method

Correct answers: C and D

Projects & Knowledge · Select TWO

1 Company	2 Problem	3 Actions	4 Workflow	5 Hidden clue
Silverline Travel, 25 staff. Marco D'Souza is the team lead.	Visa-FAQ answers differ between colleagues; one customer was quoted an old fee.	One Project: a 60-page policy as knowledge, and one instruction, “Be helpful”.	Colleagues answer from the Project and quote different fees.	**The file is last year's version, nobody owns updates, and no fee rule sits in the instructions.**

Which TWO changes will best fix the problem? (Select TWO)

A. Ask each colleague to type “use the latest information” at the start of every chat.

KILL: a per-chat reminder is not a stored fix and depends on memory.

B. Create a separate Project for each colleague so versions never clash.

KILL: it multiplies the stale copies.

C. Replace the old file with the current policy and name an owner and a review date.

KEEP: fixes the stale fact at its source.

D. Add “Never quote a fee; link to the fees page” to the Project instructions.

KEEP: a lasting rule belongs in the layer every colleague uses.

MCQ 10

SCENARIO · 5-part method

Crestline Recruitment is a 60-person agency. Recruiter Neha Anwar must shortlist for a sales role from 400 CVs by Friday. She attaches the CVs and the profiles of the firm's top performers and asks Claude to “pick the 20 who look like our top performers.” Claude returns 20 names with confidence scores. The profiles show that the top performers nearly all studied at two universities. Neha plans to send the 20 to the hiring manager and automatically reject the other 380.

Which TWO next moves are most appropriate? (Select TWO)

A. Review a sample of the 380 rejected CVs as well as the 20 picked, looking for patterns.

B. Rely on Claude's confidence scores for each of the 20 picks.

C. Remove names from the CVs, which removes any bias.

D. Replace “look like our top performers” with explicit job criteria (skills, experience).

MCQ 10 · Answer

SCENARIO · 5-part method

Correct answers: A and D

Fairness & Accountability · Select TWO

1 Company	2 Problem	3 Actions	4 Workflow	5 Hidden clue
Crestline Recruitment, 60 staff. Neha Anwar is a recruiter.	Shortlist for a sales role from 400 CVs by Friday.	She asks Claude to “pick the 20 who look like our top performers”, attaching their profiles.	Claude returns 20 names with confidence scores. She plans to send them on and auto-reject the other 380.	**Top performers share two universities, and 380 people are rejected with no human look.**

Which TWO next moves are most appropriate? (Select TWO)

A. Review a sample of the 380 rejected CVs as well as the 20 picked, looking for patterns.
KEEP: fairness means sampling who was left out, not only the top.

B. Rely on Claude's confidence scores for each of the 20 picks.
KILL: confidence is not verification.

C. Remove names from the CVs, which removes any bias.
KILL: schools and clubs still point to the same pattern.

D. Replace “look like our top performers” with explicit job criteria (skills, experience).
KEEP: an undefined standard tilts who gets through.

Thank You

All the best for your exam tomorrow!

Read the ask. Find the rule break. Explain the choice.

Created by AI & Mentors team
